

Ideation Phase - Brainstorm & Idea Prioritization Template

Date	27 September 2022
Team ID	PNT2022TMID53336
Project Name	Emerging Methods For Early Detection Of Forest Fires
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming creates a better climate for cooperation and teamwork. You encourage better friendships and communication when people engage in brainstorming activities together. Brainstorming provides an open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

 10 minutes to prepare
 1 hour to collaborate
 2-8 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

 10 minutes

A

Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

B

Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.

C

Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

 5 minutes

PROBLEM

Forest and urban fires have been and still are serious problem for many countries, which constantly patrol over potentially threatened by fire areas.

Key rules of brainstorming

To run a smooth and productive session

 Stay in topic.

 Encourage wild ideas.

 Defer judgment.

 Listen to others.

 Go for volume.

 If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

Ideas of each member is taken into account and evaluated

Aravindh Krishna

Forest fires are a major environmental issue

Camera or Video Based approach

Forest fire image recognition method based on convolutional neural networks

sensors need to be carefully placed to ensure adequate visibility

IR imaging sensors can provide a measure of the thermal radiation emitted

Fire alarm system

Harish Raja

It gives insights on relationship between predictors and response

Potential damage is reduced

Nature along with its wildlife is protected from further damages

It can be done in low cost

To reduce the effect of disaster

knowing humanity and temperature of the forest region

Janardhanan

It will be efficient cost

Accuracy 99.9%

Applying the machine learning techniques to fire detection system

Permanent monitoring and data collection

It saves for our future environment

Detection time is fast

Avinash

This would save millions of different species that resides in the forests

Enables user to detect signs of fire before it is too late

Protects the flora and fauna

Requires large amount of data

Neural Network methods is used here to detect

It is based on the video or sensor approach

3

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

The group ideas after discussion also considered

sensors need to be carefully placed to ensure adequate visibility

It is based on the video or sensor approach

It can be done in low cost

It will be efficient cost

Forest fires are a major environmental issue

It saves for our future environment

Permanent monitoring and data collection

Requires large amount of data

Nature along with its wildlife is protected from further damages

Protects the flora and fauna

Neural Network methods is used here to detect

Detection time is fast

Importance
If each of these tasks could get done without any difficulty or cost, which would have the most positive impact?

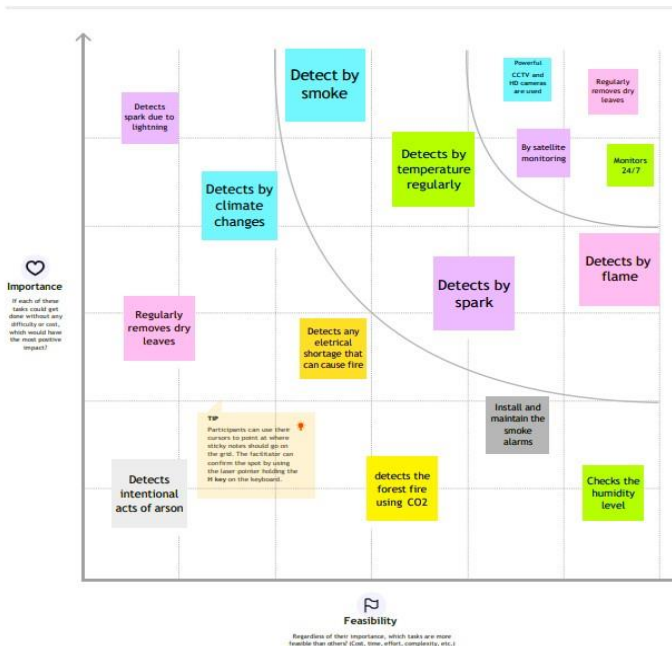

Step-3: Idea Prioritization

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

After you collaborate

You can export the mural as an image or pdf to share with members of your company who might find it helpful.

Quick add-ons

- Share the mural**
Share a view link to the mural with stakeholders to keep them in the loop about the outcomes of the session.
- Export the mural**
Export a copy of the mural as a PNG or PDF to attach to emails, include in slides, or save in your drive.

Keep moving forward

- Strategy blueprint**
Define the components of a new idea or strategy.
Open the template →
- Customer experience journey map**
Understand customer needs, motivations, and obstacles for an experience.
Open the template →
- Strengths, weaknesses, opportunities & threats**
Identify strengths, weaknesses, opportunities, and threats (SWOT) to develop a plan.
